Status of the Claims

Claims 1-20 have been presented for examination.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-10 and 15-20, drawn to a method of removing an amine protecting group from one isomer of a racemic mixture with an amidase enzyme, classified, for example in class 435, subclass 119, 227 and 280.
- II. Claims 11-13, drawn to a method of isolating a bacterium containing an amidase enzyme activity, classified, for example in class 435, subclass 30.
- III. Claim 14, drawn to a mixed bacterial culture, classified in class 435, subclass 252.4.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions I and II are drawn to entirely different processes, enzymatic resolution of isomers and a method of isolating bacteria with a desired property, while the process of Group II does not necessarily result in the product, mixed bacterial culture, of Group III.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and the search required for

Art Unit: 1651

Group I or II is not required for Group III, restriction for examination purposes as indicated is proper.

Species

This application contains claims directed to the following patentably distinct species of the claimed invention: Protected amine compounds as substrates as set forth, for example, in claims 7 and 15-20.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1-7 and 9-10 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the

Art Unit: 1651

examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

This is a restriction-election only.
